

Where the Conversion Leaks Are

nomadinternet.com · CRO Recommendations · August 2026

The single most valuable conversion mechanism on this site is the coverage-check form, which is the primary path to qualification and plan selection. However, the form's field extraction is unreliable, and the site presents multiple competing CTAs and repeated forms, causing friction and ambiguity that bleed value from this critical step.

Prioritised findings

#	Finding	Severity	Effort	PXL
1	Coverage check is the only path Coverage check is the only path	Urgent	Low	6/10
2	Multiple CTAs compete for attention Multiple near-identical coverage-check CTAs appear together, making it unclear which action advances the...	High	Medium	6/10
3	Pricing inconsistencies across pages The same plans display different price formats and values across pages, undermining trust in the stated cost.	High	Medium	5/10
4	Pricing appears before qualification Pricing is displayed before the user completes the coverage check, so the stated monthly cost is not tied to...	Medium	Medium	5/10
5	Repeated coverage forms create friction The same coverage-check form appears multiple times across pages, each requiring the visitor to re-enter...	Medium	Medium	5/10
6	Duplicate H1s dilute page focus Multiple pages carry three identical H1 headings, so the primary value proposition is repeated instead of a...	Medium	Low	5/10
7	Unexpected higher charge on rural page The rural-internet page shows a price of \$214.89 that does not appear on any other page, suggesting an...	Medium	Low	4/10

How to read this

Findings marked **verified** were measured directly and are reproducible. Everything else is a hypothesis derived from inspecting the live pages, which is why the PXL evidence questions score zero for those items. Sized opportunities describe the prize if a change works, not expected revenue: roughly 10–30% of

A/B tests produce a significant win, and winners tend to overstate their true effect.
